

INDUSTRY: Government

DISYS SERVICE: Application Development

COMPANY: Largest US-based shipping, mail management & delivery organization with global reach

BUSINESS CHALLENGE

- Client required data management support for planning, audit, and investigative activities focused on fraud and internal mail theft
- Client's internal IT Data Mining Group tasked to build a Data Warehouse to store investigative data
- Multiple databases with redundant data and ineffective query tools

THE DISYS SOLUTION

- Team Size: 5
- Technical skillsets/Technologies used: Microsoft BI Stack
- Installed a DISYS Project Team (with PM)
- Migrated five (5) data sources from legacy database through an automated process
- Automated data translation processes, integrate additional data sources and design next investigative unit's data sources
- Enable data mapping to improve data trend visualization

RESULTS & BENEFITS

- Brought a severely behind project back in line with client expectations and needs
- Bridged critical communication gaps between key stakeholders by building relationships while designing a system architecture and project solution schedule
- Delivered first (and subsequent) Data Marts on schedule and within budget
- Continuous performance monitoring
