

ENTERPRISE CONTENT MANAGEMENT SYSTEM IMPLEMENTATION

The client, a police department, was handling an ever-increasing volume of information and was using an outdated paper-based document management system. The client wanted to implement a more sophisticated Enterprise Content Management (ECM) system to enhance its document security, improve collaboration, and more efficiently store the police department's documents.

BUSINESS CHALLENGE

- The client needed to implement an enterprise content management system to better organize its important document information

THE DISYS SOLUTION

- Provided the client with Microsoft SharePoint, a low cost cloud-based file sharing program

RESULTS

- Improved the clients document organization
- Effectively connected users with mission-critical information from virtually anywhere
- Increased document security

THE CHALLENGE

Migrating and implementing the client's document information to an Enterprise Content Management System was complex and required strong attention to detail to safeguard the security of the data to ensure it was properly transitioned to the new system. The client sought specialized and experienced consultants to ensure this was done timely and without error.

THE DISYS SOLUTION

After considering several options and reviewing it with the client, DISYS recommended SharePoint 2010 as the optimal solution. SharePoint 2010 uses a unique method of organizing documents and discussions, allowing quick and easy retrieval of mission-critical information while maintaining a corporate taxonomy and security. DISYS Project Managers methodically planned the system migration and transferred all of the client's important information to a cloud-based platform, empowering the client with enhanced communication and access using Microsoft SharePoint 2010 as the collaboration tool.

The DISYS solution encompasses the following features:

- A low-cost cloud solution with full Microsoft support, enabling easy access of important information from any location
- A useful folder structure with which users can manage documents and group documents together based on common business use or categorizations
- A flexible model of groups, subgroups, and roles, leveraging active directory, to facilitate the proper security and functional scoping in the user interface
- Enhanced security of confidential data using administrative tools, ensuring information is appropriately accessed by the correct users

RESULTS

DISYS consultants provided the client with a single and organized cloud-based file sharing platform that enabled the client to connect its workers to vital documents from virtually any location. In addition, the program increased the client's document security, allowing the client to set up user roles—granting proper privileges to the right users and groups of confidential information.

OUR OFFERINGS

DISYS provides end-to-end, project-based, vendor-independent Infrastructure Support Services. DISYS supports global enterprises, government agencies, and organizations of any size in managing and operating their IT systems and services to optimize efficiency, security, and economy.
