

SharePoint Online Hybrid Collaboration Solution

The client, a mass transit and public sector transportation authority, was running SharePoint 2010 sites with the back end support from a hosted software solution provider. The client's long term vision and goals changed and they wanted to explore other various SharePoint solutions that would better utilize their current information system resources as well as support their business requirements.

The Challenge

The client's SharePoint business support needs were expanding and needed to provide a future information system support to multiple projects and organizations. The client was seeking a low-cost solution to reduce overhead costs associated with its business as well as maintain the ability to control and supervise its important data at their onsite facility. Furthermore, in order to ensure the SharePoint platform was an efficient tool for the client, they needed a proper training program in place for its expanding workforce and easy intranet access for all employees.

Requirements

DISYS recommended the following technology solutions for achieving the desired results:

- Client intranet web sites should be able to access by multiple browsers (include IE, Google Chrome, Firefox and/or Mac)
- The Intranet needs to be accessible by its employees or consultants with appropriate Active Directory account setup
- Training programs and activities need to carefully design and appropriate communication channels should be considered to make sure the SharePoint site(s) become efficient tool/environment for personnel

The DISYS Solution

After carefully reviewing the situation, DISYS organized an IS management team to identify appropriate training program's activities. The DISYS team assessed and defined the implementation strategy for SharePoint 2013 On-Premise solution to be installed at the client's location. DISYS selected a Hybrid approach to utilize SharePoint On-line to support regular files or documents and SharePoint On-Premise to support large files and address storage needs.

Results

DISYS moved the client to a Hybrid solution with a cloud-based SharePoint and On-premise solution that enabled the client to manage its SharePoint site collections and sites in a seamless and consolidated manner. The SharePoint hybrid cloud solution, based online and on premise, reduced the overhead costs associated with the large cost which tied to the SharePoint 360 model and improved efficiencies supporting internal and external user communities. In addition, the hybrid approach allowed the client to utilize the benefits of the SharePoint online solution to support

Industry

Transportation

Business Challenge

The client needed to implement a collaboration solution to better organize its important document information.

The DISYS Solution

Provided the client with Microsoft SharePoint, a low cost cloud-based file sharing program.

Results

- Improved the clients document organization
- Effectively connected users with mission-critical information from virtually anywhere
- Increased document security

regular files or documents, while for the special or large size files, the client uses on-premise to address the access, and storage needs. The client benefited from more timely and accurate execution result and problem resolution rate which allowed the client's future business functions deployment cycle time shorter and have less errors. Moreover, the hybrid solution expanded the SharePoint enterprise capabilities to include Human Resources, Marketing, and Finance. The SharePoint Hybrid solution also provided appropriate administration tools to ensure the access privilege and information protection is achieved according to expectations.

Our Offerings
